

Ricardo Trejo Sanjuan

Front-End Engineer | React Developer | Angular Developer | Full Stack Engineer

Redmond, WA • trejosanjuanricardo@gmail.com • +1 206 532 4627

[LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Senior Software Engineer with nearly 10 years of experience building scalable web applications, micro frontends, enterprise platforms, and full-stack solutions. Expertise in React, Angular, TypeScript, JavaScript, Node.js, REST APIs, state management, performance optimization, and cloud-based application development. Proven track record modernizing legacy systems, leading large-scale migrations, improving application performance, and delivering high-quality user experiences through modern frontend architectures and CI/CD practices.

Experience

Freelance Software Engineer

Remote

Full Stack Developer

April 2025 - Present

- Delivered AI-driven software solutions for startups and small businesses, aligning technical implementation with business objectives.
- Built full-stack applications using React, TypeScript, Tailwind CSS, Node.js, and Express.
- Integrated real-time AI chat experiences with scalable backend services.
- Integrated third-party APIs including authentication, analytics, and payment processing solutions.
- Collaborated directly with clients from requirements gathering through production deployment.

Globant

Remote, Mexico

Application Front-End Developer

November 2020 – January 2025

- Built and scaled a complex micro frontend architecture using React.js, enabling modular development and faster feature deployment across Finning's customer portal.
- Led the migration of a mission-critical Angular 7 portal to Angular 14 and React-based micro frontends, modernizing the architecture, improving maintainability, and enabling independent deployments across development teams.
- Developed highly responsive and reusable UI components using React, TypeScript, and Redux (including Redux Toolkit) to ensure a seamless user experience across devices.
- Implemented Zustand state management architecture, reducing redundant API requests and improving application responsiveness and data consistency across micro frontends.
- Partnered with UX/UI designers, backend engineers, and product stakeholders to deliver customer-facing features across a large-scale enterprise platform.
- Led performance optimization initiatives, including lazy loading, memoization, and code splitting, which significantly improved initial load time and runtime efficiency.
- Enforced code quality through ESLint, Prettier, and strict TypeScript typing, reducing runtime errors and improving developer productivity.
- Implemented unit and integration tests using Jest and React Testing Library, ensuring critical features were covered and minimizing regressions.
- Maintained and enhanced Node.js/Express services, ensuring robust backend support for frontend applications.
- Adopted CI/CD workflows with GitHub Actions, enabling automated testing and deployments for faster, safer releases.

Strat Plus

Mexico City, Mexico

Full Stack Developer

November 2018 – November 2020

- Designed and developed highly interactive and data-driven dashboards using React.js and Node.js, empowering stakeholders with real-time business intelligence insights through seamless and dynamic visualizations.
- Built and optimized RESTful APIs with Express.js and PostgreSQL, focusing on scalability, security, and performance to handle high traffic and large data sets effectively.
- Implemented Redux and Redux Toolkit for efficient state management across complex React applications, ensuring predictable state flows and optimized performance for large-scale enterprise features.
- Developed custom React hooks for handling business logic and UI interactions, as well as reusable UI components within an internal design system, promoting consistency and reusability across multiple projects.
- Optimized app performance by leveraging React.memo, lazy loading, and code splitting to improve load times and reduce bundle size, resulting in a more responsive user experience.
- Implemented CI/CD pipelines using GitHub Actions, automating testing and deployments to streamline workflows and ensure faster and more reliable releases.
- Built an Angular-based portal for enterprise applications, significantly improving usability and accessibility through modern UI components and responsive design patterns, contributing to a better user experience across devices.
- Created a cross-platform mobile application using Angular with Ionic, enhancing user experience.
- Built a Flutter application to deliver a native mobile experience with optimized performance.

Grupo Asteci

Mexico City, Mexico

Web UI Developer

September 2018 – November 2018

- Created and optimized Angular-based web applications for financial services.
- Designed and implemented modular SCSS-based styling, improving code reusability and maintainability.
- Translated UX wireframes and design specifications into responsive, high-performance Angular applications, improving usability, accessibility, and cross-device compatibility.

Livingston International

Mexico City, Mexico

Front End Developer

October 2015 — September 2018

- Developed enterprise web applications and RESTful services using Angular, AngularJS, Java, and Docker in a large-scale logistics environment.
- Built modular Angular and AngularJS applications using reusable component architectures to accelerate feature delivery and improve maintainability.
- Developed and maintained Java-based microservices supporting business-critical logistics workflows and API integrations.
- Dockerized and hosted an angular app in a Docker container.

Grupo SICOSS

Mexico City, Mexico

- Developed AngularJS applications consuming RESTful APIs using JavaScript, jQuery, and Bootstrap to deliver responsive business solutions.
- Managed SQL Server 2012 databases for efficient data storage and retrieval.
- Continuous integration CI and Continuous delivery CD.

Technical Skills

Front-End Development:

Proficient in modern front-end frameworks and libraries, including **React.js**, **Angular**, **TypeScript**, **JavaScript (ES6+)**, **Redux**, **Redux Toolkit**, **Zustand**, **React Hook Form**, **Tailwind CSS**, **Material-UI**, and **Fluent UI**. Experienced in developing scalable, responsive, and accessible user interfaces with a focus on component reusability and performance optimization.

Back-End

Development:

Experienced in building RESTful APIs and server-side applications using **Node.js**, **Express.js**, and **PostgreSQL**. Knowledgeable in database schema design, query optimization, and secure authentication mechanisms.

State Management & Architecture:

Strong background in client-side state management using **Redux**, **Redux Toolkit**, **Zustand**, and **Context API**. Familiar with implementing scalable application architectures using **Atomic Design**, **component-based development**, and **micro-frontend patterns** (e.g., **single-spa**, **module federation**).

DevOps & Tooling:

Skilled in setting up and maintaining development workflows with **Git**, **GitHub Actions**, **Docker**, and **CI/CD pipelines**. Committed to code quality through **unit testing** (**Jest**, **React Testing Library**), **integration testing**, and **code linting/formatting tools** such as **ESLint** and **Prettier**.

Education

Universidad Politécnica de Pachuca

Software Engineer

Pachuca, Mexico

September 2011 — December 2014
